

## Railway Reservation system.

Booking tickets at the spot at the railways is tiring and time consuming due to long queues in booking counters. Develop user-friendly system to pre-book tickets online.

1. Railway reservation system provides the train timing details, train details, seats available.
2. Customer login and can opt type of reservation as in:
  - confirm reservation for seats.
  - No cancellation reservation
  - Waiting list
3. Customer can choose any number of seats according to availability online here all classes of train seats included.
4. Customer has to give personal details needed along with number of children travelling if any.
5. Destination to be accurately given, cannot be altered after payment.
6. System computes cost for customer according to no. of adults and children since price is less for children.
7. Customer has to make payment in online mode and seats will be reserved.
8. At railways scanning is done and access is granted.
