

Coffee Vending machine

coffee vending machine is designed with accurate algorithm to dispense coffee as requested by the users. All functions done by machine without involving any human making coffee or ~~make~~ giving bill.

1. Machine display system shows up coffee catalog ~~area~~ from which user can choose.
2. Customer selects the type of coffee from the display.
3. Machine display system pops up a form to know the details from user.
4. Customer can choose quantity of coffee, concentration of coffee beans, and amount of milk and sugar they prefer.
5. Machine ~~can~~ collects information and computes accurate bill for the customer.
6. Customer inserts money.
7. Machine warns if money inserted is not sufficient.
8. Machine returns back change to customer if necessary.
9. Machine prepares coffee as per the given details and dispense coffee.
10. New variety of coffee can be added to catalog.
