

# Hostel Management System.

## Problem Statement.

Maintaining students details in hostel in a book or papers form is inefficient since data is huge and difficult to edit or search for a particular student's information.

Co-ordinating between the students and management can be made easier through this system.

## Use cases of system. SRS

1. Admin can login and can allot rooms to students, view details
2. Student can login using credential provided and give feedback about staff and services. They can set up their profile page.
3. Student can share comments or complains about any issue related to the hostel.
4. Admin can review feedbacks and contact the students to fix issues.
5. Students can view and select food menu and opt for veg or non-veg food as per preference.
6. Food & department can view details put by students and prepare food according to that.
7. Cleaning and laundry facilities can be arranged by admin on weekly bases or on student's request.
8. Admin and student can see records of payments made by students.
