

College Information System

Problem Statement:

College information system to replace the old system of manually maintaining all details. It is very difficult to handle all informations in papers and documents since data is huge. As well as it is difficult to update the data consistently. Therefore online college information system ~~can~~ is efficient and easy to handle.

Use cases of system

1. The management unit (admin) can add students, faculties and members of other functional units of college.
2. Admin can view, delete and edit details of the users. These details include personal and academic informations shared by students and faculty.
3. Teaching faculty can view all information of students and edit internal evaluation performance of students and their ~~as~~ attendance records.
4. Students add, edit and view all informations. They can register for courses each semester.
5. Students can pay college fees and exam fees through online payment.
6. COE unit can ~~add~~ post and delete results after each examinations and all other users can view the results.
